# Learn Git and GitHub without any code!

Using the Hello World guide, you'll create a repository, start a branch, write comments, and open a pull request.

Let's get started!

## You've been added to the **ska-sa** organization!

Here are some quick tips for a first-time organization member.

- Use the switch context button in the upper left corner of this page to switch between your personal context (**skanewbielearning**) and organizations you are a member of.
- After you switch contexts you'll see an organization-focused dashboard that lists out organization repositories and activities.

# The GitHub Workflow

This is the workflow I recommend you use when you want to contribute to projects on GitHub.

1. **fork** a project on github.
2. **clone** your github fork to your computer
3. [optional] **create a topic branch** for your own work in your local clone
4. make your **changes** on your computer
5. **commit** changes to your local repository
6. **push** the changes to your github fork
7. send a **pull request** back to the original project
